

CYBER INCIDENT RESPONSE

HOW EFFECTIVELY WILL YOU RESPOND?

Nobody will want it to happen to them, but organisations must face the reality that successful cyber attacks will occur, and it is imperative to develop an effective Cyber Incident Response Plan (CIRP) to mitigate the impact and also to have the right team in place, ready to respond to any crisis.

CYBER INCIDENT RESPONSE

HOW EFFECTIVELY WILL YOU RESPOND?

Quick discovery and an efficient response to attacks on your critical assets can save a significant amount of time, money and staff hours. Cyberplus offer Cyber Incident Response Planning service and training to help optimise your incident response plan, coordinate an incident response team and determine the source, cause and extent of a cyber security breach quickly and effectively.

THE 6 STEPS TO SUCCESSFUL CYBER INCIDENT RESPONSE

1. Preparation

Do you have suitable defences in place, including tools, teams and training for incidents before they happen?

2. Detection & Identification

Are incidents being identified thoroughly?

3. Containment

The Incident needs to be contained immediately to prevent and reduce collateral damage.

4. Eradication

Get rid of the malicious code, unauthorised account, or bad employee that caused the incident.

5. Recovery

Ensure systems meet company standards or baselines, before returning to service and continue to monitor it for any aberrant behaviour to be sure that incident has been fully resolved.

6. After-Effects

Reports should detail what happened, why it happened, what could have prevented it, and how to prevent it from happening again in the future.

Whilst most organisations have Cyber Incident Response Plans, many do not utilise them fully. Perhaps this is due to either inadequate design, implementation, or both. Maybe the plan and its procedures are not practiced enough within the response team - potentially meaning that any decision making is deferred and inconsistent. When discovering and responding to a cyber incident, any delay could be very costly.

BE READY!

Why not get the World Class support you need simply on call?

Our vital patches with their tools and experts are available immediately on call when you subscribe to **Cyberplus 24/7**.

The following patches are billed on our discounted incident follow up rates.

SUMMARY IR PATCHES:

1. TECHNICAL CYBER INCIDENT RESPONSE

£15k retainer membership/annual fee, £5k invocation charge per incident, includes immediate response, multi disciplinary technical and cyber specialists, triage and risk assessment

- Review all technical and procedural controls
- Assess all evidence, identify motive and extent of attack and any hidden factors

2. CORPORATE CYBER INCIDENT MANAGEMENT

£15k retainer membership/annual fee, £5k invocation charge per incident, includes immediate response, multi non technical crisis management and business continuity specialists

- Manage law enforcement, regulatory bodies and customer liaison
- Manage all internal and external stakeholders

3. POST CYBER BREACH REVIEW AND CLEANUP

£15k retainer membership/annual fee, £5k charge per post incident review.

- Technical and non technical root cause analysis of breach
- Compliance and governance assessment to identify any residual risks
- Lessons learnt procedure to improve response for future incidents

ADDITIONS:

- **50% discount on ExecSIM** as annual members, recommended for all contracts
- **Bundle discounts** for membership to multiple patch modules
